

The 2009 RIZOMA catalogue: an extraordinary variety
of specific and individual solutions.

design
& *performance*

design

RIZOMA have constantly sought for a sound quality. Hence, the choice of an excellent raw material together with a considerable technological evolution, has always distinguished our high quality accessories on the market.

The concept Design is composed of Quality and a Unique Style; completed with the "Made in Italy" logo, it has become a synonym of a perceptive artistic imprint and ease of use. Design means "to project": an idea that turns into reality where shape and function meet their utmost implementation. Our accessories, behind their extremely elegant image, conceal a continuous studies of application, material and finishing.

The prototypes realized by our R&D Center, have been studied in order to find the best technical solutions, as well as to render our components reliable and effective. These tests are has been taken over by the professional pilots in extreme conditions in a race track. The 2009 catalogue contains an extraordinary variety of specific accessories, as well as a lot of news: Rizoma has always kept and will keep on looking for a unique quality style.

Have a pleasant view!
Rizoma Staff

enjoy the *racing*
experience

moto gp

RIZOMA is an official sponsor of the French pilot Randy De Puniet in the HONDA LCR Team. The LCR Team has been taking part, for several years already, in the world's most prestigious motorcycle race.

Its founder, Lucio Cecchinello, besides co-operation with high level pilots and excellent technical staff, has succeeded various times in three different categories.

We've decided to sponsor a winning team pilot due to our constant wish to succeed rendering our brand well-known and remarkable.

Rizoma confirm to be a company which always take care of the technological evolution in co-operation with those who base their own experience on the efficacy and innovation.

safety first

PROGUARD SYSTEM®

After a long-term research, having used the latest hi-tech control systems, successfully employed in the Formula 1, our company have designed an absolutely exclusive product, meant to increase the safety degree of motorcyclists.

The product called PROGUARD SYSTEM®, prevents the fall caused by an accidental impact that involves the brake lever, as described above. The shock does not usually have grave consequences, but it is not excluded the possibility of tilting over.

PROGUARD SYSTEM® protects the brake lever from an involuntary pressure in a simple and effective way. Moreover, the system averts an unintentional actuation of the clutch lever, which in case of contact, could get detached causing a dangerous situation (traction/idle/traction of the wheel).

design registration / patent pending

Accidental contact

During a number of recent motorcycle races, there have been some accidents due to injurious falls caused by the contact of the front brake lever with a lateral or rear point of another bike.

An unexpected proximity to an obstacle, with the same ensuing consequence, may possibly happen outside the track, as well.

aerodynamics

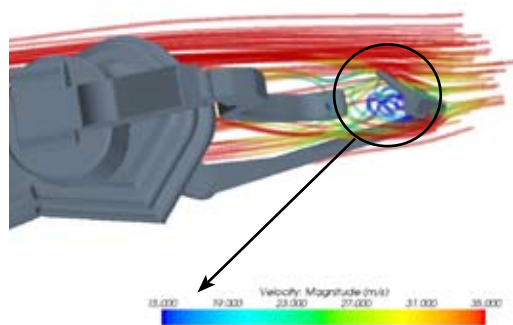

The speed exerts negative influence on the aerodynamics? PROGUARD SYSTEM® solves the problem.

Analyzing the data obtained during the races, it's been shown up that once the a 180 km/h speed is exceeded, both brake and clutch levers are undergone a front pressure caused by the air resistance. This results in a value variation up to 0.7-0.8 bar in the hydraulic plant and lead to attrition between the brake pads and the disc, as well as to a sliding of the hydraulic clutch components.

To decrease these inconveniences and to avoid any possible efficiency loss, the outer parts of our present brake and clutch levers have been machined by milling in a specific way that allows to discharge the air flows. As a result, the problem has been significantly reduced, but it's obvious that the air pressure exerted on the front levers at high speed does not allow its complete elimination.

Another function of the PROGUARD SYSTEM® is removing the pressure caused by the air on the lever, so to avoid the formation of brake attrition and overheating consequences, as well as the clutch sliding and effectiveness losses. All this through its aerodynamic part.

- PROGUARD SYSTEM® removed the pressure caused by the air on the lever

Wind tunnel

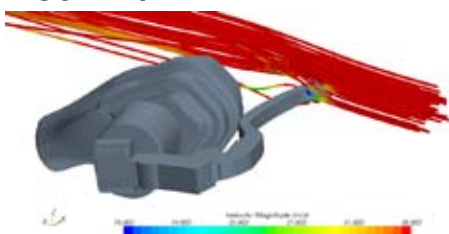

The CFD analysis of the PROGUARD SYSTEM® is a numeric type activity of the Computerized Hydrodynamics that represents the state of the numeric stimulations art in the Aerodynamic field. The computation code being used is STAR CCM+, produced by CD-ADAPCO, a world leading manufacturer of the CAE systems dedicated to the industry and, in particular, to the CFD application in particular.

CD-ADAPCO, with their products, is an official partner of the largest Teams, such as the America's Cup and Formula 1.

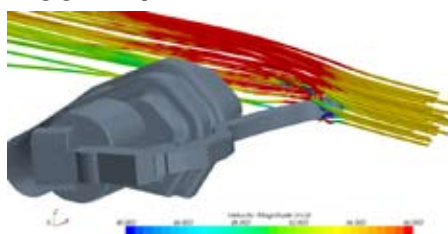

The calculation activities have been enlarged in co-operation with AT.I, the engineering department of ATOMO GROUP LTD.

Presently, RIZOMA is the only manufacturer of motorcycle components that employs these technologies for the development of its own product lines.

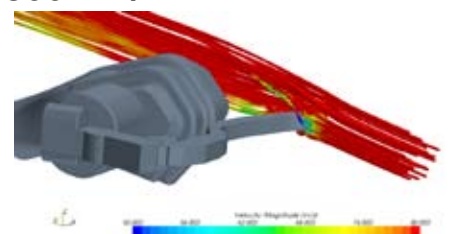

130 km/h

200 km/h

300 km/h

material

The PROGUARD SYSTEM® is a synthesis of resistance, durability and functionality. Its body is made of a fusion of aluminum–silicon–magnesium and manganese, which assure the necessary rigidness and at the same time a low fragility useful in event of fall not caused by an unexpected contact of the lever.

The AERODYNAMIC PART is made of a particular plastic material, resistant to the atmospheric exposures, which in case of impact, can bend toward the motorcyclist hand.

style

An extreme care about every small detail and using the most efficient materials distinguish this invention, as well. The typical style of all Rizoma products always puts into evidence an attentive consideration for the aesthetics and design. As a result, the emotional effect, the ability to arouse positive sensations together with the functional and hi-tech aspect.

BRAKE/CLUTCH LEVERS

lightness & *motion*

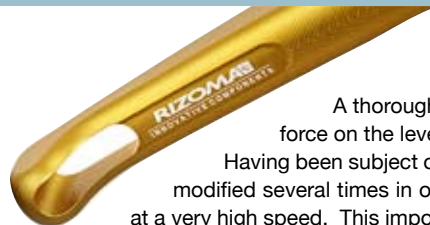

design registration # 524939

colors

info

Aerodynamic properties and grip

A thorough research has proved that at high speed the air pressure force on the lever puts the circuit under pressure rendering it inactive.

Having been subject of a long-term studies in a wind tunnel, the lever has been modified several times in order to make it less sensible to air pressure action, even at a very high speed. This important achievement led the company to patent the original design.

The precise ultrathin front lines, as well as the shape, assure a better grip.

Articulated joint and adjustment

The levers are created in line with the latest technology: a broad range of adjustments, including movement on the bearings with return springs, makes it possible to improve their functioning, reliability and durability.

The articulated joint allows to fold up the lever in case of fall and thus to avoid its break.

Lightness

The lever is characterised by an ultralight weight thanks to its particular shape with hollow spaces left for this purpose.

In the table above there are the most common bike models.

In each case, before ordering, please, check the dimensions of the original product (OEM).

It's a good practise to fasten the engine oil filler cap with a safety wire.

Rizoma engine oil filler caps come with with a removable bracket for the safety wire.

simple & *effective*

info

CODICI E MODELLI NELLE PAGINE SEGUENTI

Essential and indispensable fairing and engine guards. They limit the damage to the engine, fairings and frame in the event of a fall.

The part made of "derlyn®" combined with aluminium cushions the impact, protecting the engine from undesirable consequences.

SPARE PARTS

The code of the engine/airbox guard is indicated in the tables. The spare part, subject to wear in case of fall, is the one made of Derlyn®.

advanced application

LICENSE PLATE SUPPORT

design registration # 524939

adjustable inclination

In 2009 we introduced a completely new style of our license support plates which shall assure a better performance: a broad range of adjustments makes it possible to modify the support inclination, in the countries where allowed by the traffic regulations.

adjustable height

The license plate support can be moved along its axle to fix the required height.

indicator lights

The adjustable supports - included in the kit - make it possible to fix the necessary position of the indicators.

license plate support light

The high tech LED license plate support light is homologated in order to assure its effectiveness: in any case, one can prefer not to mount it without compromising the license plate support design.

sizes

The kit comprises three different sizes of license plate supports: (157x157 mm, 175x130 mm, 146x69.5 mm) fitting various license dimensions.

REAR SET CONTROL KIT

best function

info

Our rear control kits, made of the finest billet aluminium alloy and especially designed for sports, are characterized by a unique lightness and resistance to breaking.

Various racing tests have revealed the necessity of their vertical and horizontal adjustment. The mechanisms mounted on the bearings assure a precise change and braking. The product quality and safety are assured by the TÜV certificate.

- Our rear set control kits are predisposed to the OEM stop switch positioning

Accessories with design registration

Mirrors equipped with High-Quality "Blue Style" Mirror-Glasses, "amber" Mirror-Glass or convex mirror glass

CERTIFICATION & OMOLOGATION

The certification and homologation granted to a large number of our accessories constitute an essential phase of the production process: a certificate of conformity is a statement that assures the high level functionality and performance of a product.

An additional aesthetic type of approval certifies the unique and original design of our products and distinguishes even more our brand-name.

LEGAL NOTICE

Our products are assured as regards quality, resistance and durability. However, they are not approved for the road circulation in the countries where homologation is required.

Thus RIZOMA® srl declines any responsibility for a different use of its products and kindly asks all the dealers to inform their customers about these restrictions.

RIZOMA® srl has nothing to do with HONDA®, YAMAHA®, SUZUKI®, KAWASAKI®, KTM®, MV AGUSTA®, DUCATI®, HARLEY-DAVIDSON®, BUELL®, BMW®, TRIUMPH® trademarks or their dealers.

All the products with trademarks or motorcycle identification names are to be considered exclusively as references for the use of our accessories.
